EDUCATION

M.A.M College Of Engineering

Bachelor of Technology in Artificial Intelligence and Data Science

Tiruchirappali Tamil Nadu

Nov. 2021 – May 2025

Kendriya Vidyalaya

12th CBSE Board – 88.6%

Thanjavur, Tamil Nadu

April 2020 – June 2021

Kendriya Vidyalaya

10th CBSE Board – 92%

Thanjavur, Tamil Nadu

April 2018 – May 2019

EXPERIENCE

Software Developer Intern

VISEE AI LABS Pvt Ltd

Nov. 2025 – Present

Bengaluru, Karnataka

- Engineered an AI-powered office asset management system using Gemini Vision API and Supabase, automating image-based asset identification and location mapping eliminating manual tracking across 15 asset categories.
- Built and deployed a full-stack salon services platform with booking flows, lead capture, and an admin dashboard, alongside a Firebase-backed conversational AI chatbot that automated customer onboarding and operational queries onboarding 10 businesses and handling 50+ daily interactions.
- Designed a production-grade AI voice agent system integrating ElevenLabs and Sarvam AI with multi-provider fallback architecture, enabling automated appointment booking and customer support for clients.

Summer Intern

C-DAC

June 2023 – July 2023

Chennai, Tamil Nadu

- Built an Android attendance system using FaceNet embeddings for real-time facial recognition, implementing face detection, feature extraction, and identity matching pipeline achieving reliable recognition across varying lighting conditions.
- Trained and deployed YOLOv8 object detection models for real-time inference on Android, optimizing model performance through fine-tuning and quantization for on-device execution.

PROJECTS

Bloom IDE | [Link](#)

- Built a cross-platform desktop IDE using Tauri, React, TypeScript, and Monaco Editor delivering sub-second load times via Rust backend, with customizable workspaces, integrated terminal, and a multi-theme engine, reducing Electron-style memory overhead significantly.
- Integrated an AI coding assistant with full codebase context awareness, supporting code generation, debugging, refactoring, and inline explanations enabling developers to navigate and modify unfamiliar codebases without manual documentation lookup.
- Engineered a Visual Codebase Explorer that statically analyzes project structure and auto-generates interactive dependency and architecture diagrams cutting onboarding time for new contributors on large codebases.

JAARVIS | [Link](#)

- Developed a multi-label classification model to predict various natural disasters and associated risk levels using ensemble learning techniques
- Performed extensive data cleaning, feature engineering, and preprocessing to handle missing values, outliers, and categorical variables
- Evaluated model performance using precision, recall, and F1-score metrics, optimizing hyperparameters for reliable risk assessment

TECHNICAL SKILLS

Languages: Java, Python, Javascript, Typescript

Tools: Git, GitHub, Postman, Linux

Database: MySQL, MongoDB, PostgreSQL

Web Technologies: React.js, Next.js, Node.js, Express.js

Cloud/Devops: Firebase, Supabase, Vercel

AI/ML Libraries: Numpy, Pandas, Matplotlib, Scikit-learn
